O: (281) 441-5438
F: (713) 699-5186

BREAKING THE MOLD

For over 80 years Aitken has partnered with clients to engineer and manufacture equipment solutions for their critical projects. Having earned trust from some of industry's iconic brands, it is our experience, expertise and willingness to challenge the norm that helps our clients, big and small, thrive.

Our team is crafted with people that drive innovation by thinking without limits. This allows us to be highly responsive to evolving needs throughout a project, manage tight fabrication schedules and maintain quality control timing to deliver products on time.

KEY PRODUCT CATEGORIES

Over the years, we have become known for working alongside our clients in helping to clearly identify the challenge so our engineering department can design custom solutions. When a more standardized product is needed, our catalogue offers a wide range of products that service heavy industrial industries. Products are available in carbon steel and most alloys ranging in size up to 72" and beyond.

- Plate Products
- Pressure Vessels
- Flow Products
- Metering Products

AREAS OF EXPERTISE

Engineering Design

Inhouse PE and application engineers with direct experience with parts

Customization

Solution-focused designs

Specialty welding

450+ welding procedures for ferrous and exotic metals

Material Sourcing

Domestic and international

Fabrication

Advanced FEA and CFD capabilities

Field Installation

Access to 1,000+ craft labor for larger installs

A DBM GLOBAL COMPANY

CERTIFICATIONS

Strainers

The problem with unwanted material in pipelines is a never ending one. Whether the flowing material is water, oil, gas, paint or a variety of food or chemical products, there is often present unwanted matter that can cause serious problems. Dirt, foreign matter or even clumps of the product itself, can clog or damage spray nozzles, pumps, turbine meters, or similar equipment.

Strainers are a solution to these problems. They prevent the passage of unwanted matter in the line that could cause damage or even ruin the product itself.

When compared to the cost of replacing damaged pumps, meters, etc., strainers are an inexpensive insurance policy.

Strainers are widely used in the following industries:

- Tank cars and truck
- Ceramics
- Chemicals
- Electric power
- Food processing
- Marine
- Turbine meter service
- Pipeline
- Paint, ink, latex
- Pulp & paper
- Petroleum refining
- Pharmaceutical
- Process equipment
- Waste & water treatment
- Compressor stations
- Co-generation

Tee Strainers

STANDARD STRAINER:

Our standard “bathtub” strainer uses double runner rods so that flow can be reversed. Our special angle flow “TAM” strainer allows for bi-directional flow.

STANDARD MATERIAL SPECIFICATIONS:

standard material of construction is carbon steel.
Basket material is specified by the customer.

OTHER MATERIALS AVAILABLE IN:

- 11/4CR-1/2MO
- 5 CR - 1/2 MO
- 9 CR -1 MO
- 304/304L SS
- 316/316L SS
- Monel
- Other alloys – reviewed on an individual basis.

DIMENSIONAL DATA:

See following pages.

PRESSURE DROP INFORMATION:

See pressure drop charts.

RECOMMENDED SPARE PARTS:

- 1. Basket
- 2. Gaskets for access opening
- 3. O-rings for quick opening access closures

OPTIONS:

- 1. Quick opening closures
- 2. Pressure tap connections
- 3. Vents
- 4. Davit for access blind flange
- 5. Blowdown basket

DESIGN CODE(S) / STANDARDS:

Standard design and fabrication per ASME B31.3 other codes available are:
ASME 31.1
ASME B31.4
ASME B31.8
ASME Pressure vessel and boiler code, section VIII, DIV. 1 DOT NACE
MDMT required for ASME B31.3 and section VIII design.

PAINT/COATINGS:

Provided with external SP-3 mechanical tool cleaning and one coat of shop primer or as specified by customer.

NOTE:

Per applicable code and/or as specified by customer.

To use above conversion charts, locate the unit to be converted in the left hand column. Then follow the conversion factors across the row for the desired conversion unit. Use this factor to multiply with your numerical value to convert. Example: Convert 5 psi to inches of water. From the Conversion of Pressure and Head Chart, 5 (psi) x 27.7276 (Conversion factor) = 138.638 inches of water.

Example how to use table: Convert 70 degrees Fahrenheit to centigrade. Find your value (70) in the bold letters. To the left, under the column °C, is your conversion for centigrade. Answer: 70°F = 21.1 °C Note, for converting centigrade to Fahrenheit the same procedure would be used, except you would go to the right hand column for degrees Fahrenheit. Therefore, 70 degrees centigrade would equal to 158 degrees Fahrenheit.

100	99.05	0.611	38.12

The above table is based on the weight of oil @ 60°F in air to the same weight of water @ 60°F in air.
The relation of Degrees Baume' or API to Specific Gravity is expressed by the following formulas:

For liquids lighter than water
Degrees Baume' = 140/G - 130
Degrees A.P.I. = 141.5/G - 131.5

For liquids heavier than water:
Degrees Baume' = 145 - 145/G
